There's been a change of plan.

Reusable Components

Deep Dive

Robin Panneels, Canguru Solutions

Valentine's edition

The logo for UI5con features the text 'UI5con' in a bold, sans-serif font. The 'UI5' is in orange and the 'con' is in yellow. A white heart shape is positioned behind the '5' and the first 'c'. To the right of the heart, there is a cluster of white binary code (0s and 1s) of varying sizes.

Who already implemented reusable Components?

What is a **Component**?

Every UI5 application is a Component!

Every UI5 application is a Component!

Because we always extend:

Every **UI5 application** is a **Component**!

Because we always extend:

`sap.ui.core.UIComponent`

Every **UI5 application** is a **Component**!

Because we always extend:

`sap.ui.core.UIComponent`

which extends

Every **UI5 application** is a **Component**!

Because we always extend:

`sap.ui.core.UIComponent`

which extends

`sap.ui.core.Component`

UI5 applications can be reused in another application

UI5 applications can be reused in another application

In this case we have a **rootView**

But we can also expose a **Control**

See metadata of sap.ui.core.UIComponent:

```
1  ...
2  metadata : {
3      "abstract": true,
4      rootView : null, // the rootView to open
5      publicMethods: [ "render" ],
6      aggregations: {
7          /**
8           * The root control of the UIComponent.
9           *
10          * The root control should be created inside the function
11          * {@link sap.ui.core.UIComponent#createContent}.
12          */
13          "rootControl": {
14              type: "sap.ui.core.Control",
15              multiple: false,
16              visibility: "hidden"
17          }
18      },
19      ...
20 }
```

Use-cases for reusable Components

Use-cases for reusable Components

- Search helps/Value Help Dialogs

Use-cases for reusable Components

- Search helps/Value Help Dialogs
- Information Dialog views

Use-cases for reusable Components

- Search helps/Value Help Dialogs
- Information Dialog views
- Lists and Tables

Use-cases for reusable Components

- Search helps/Value Help Dialogs

Components **Vs** Controls

Components **Vs** Controls

Components can create models and work with Back-ends

Components **Vs** Controls

Components can create models and work with Back-ends

Controls can't

Reusable Component example: **AttachmentManager**

Reusable Component example: **AttachmentManager**

Initial goals:

Reusable Component example: **AttachmentManager**

Initial goals:

- Wrapper for UploadCollection

Reusable Component example: **AttachmentManager**

Initial goals:

- Wrapper for UploadCollection
- UploadSet implementation

Reusable Component example: **AttachmentManager**

Initial goals:

- Wrapper for UploadCollection
- UploadSet implementation
- Standardize working with attachments and links

You can also go too far with implementing reusable components

You can also go too far with implementing reusable components

You can propagate the models from the application to the
ComponentContainer

So the risk exists that you make a Reusable Component app dependent...
